The developments have no analogue in the world practice and with European certificates!

I will make them with foot control soon! The children deserve it!

https://www.facebook.com/100001842044637/videos/vb.100001842044637/2614788858592490/?type=2&video_source=user_video_tab – their work.

I am convinced that in connection with COVID-19, foot control should be a widespread and mandatory global practice, especially in public WC-nodes such as: Kindergartens, schools, dormitories, hotels, skyscrapers,, nursing homes,, barracks, prisons, police, factories...

Wherever large groups of people work and live in one place!

It is done by replacing the fittings / parts / with my own development:

"Universal fittings with wide-format drain valve with filling float mechanism and foot control for monoblock and other toilet cisterns"

Reg.№ 112779 /18.07.2018 in the Patent Office, with European certificate

Current Reg.№ 113138 / 10.06.2020 in the Patent Office of the Republic of Bulgaria

Abstract

Reg.№ 113139 / 10.06.2020 in the Patent Office of the Republic of Bulgaria

Georgi Stoyanov Dimitrov, Republic of Bulgaria

Get the best! Solutions without analogue! Take the best! Just do it!

The invention relates to a universal valve with a filling float mechanism and a wide-format drain valve for foot and manual compromise control in mono-block and other toilet cisterns. Foot control should be a future global practice, especially in public places against the transmission of viruses with buttons. In people with physical disabilities of the limbs, discrimination in their management has been permanently and permanently eliminated because they have a choice of five options. With the selected operating principle, the scale in any form cannot be layered on the drain valve to allow leaks. The world hit for additional coloring, decontamination, aromatization of water is a real effect, not post-factum, as is the current practice of hanging flavors in the plate, which when dropped create thousands of troubles from clogging the gray drainage channel. Only by lifting the lid, which has already been released, blocks for thousands of washes are hooked into the cistern. For the first time in world practice, odors are sucked directly from the toilet bowl, not from the whole room. The universal fittings are applicable to all types of constructions mono-block toilet cisterns with upper and lower power supply. It also works with rainwater, industrial water from boreholes, treatment plants, including seawater, as all parts are made of PVC and stainless metals.

https://www.facebook.com/100001842044637/videos/vb.100001842044637/2832998650104842/?type=2&video_source=user_video_tab - The first model

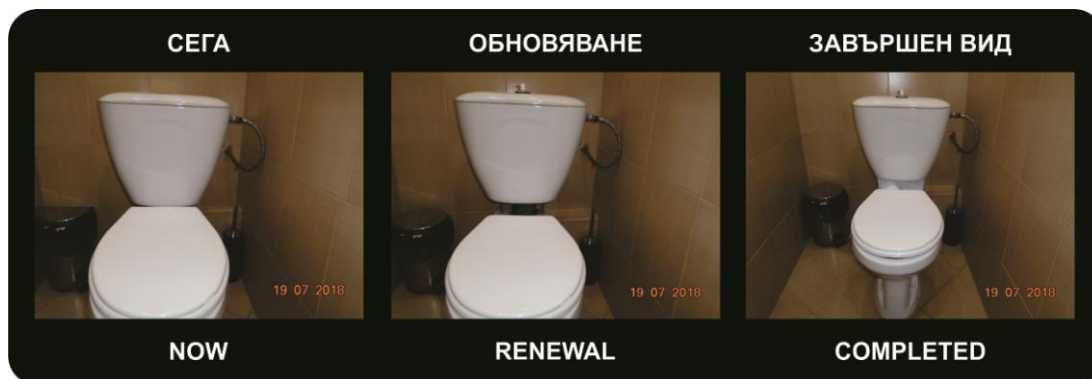

European certificate!

Reg.№ 112 779 / 18.07.2018 in our Patent Office.

Certificate - Protocol No. 117 1472 / 23.10.2018

We replace parts with ours, for all kinds of Bulgarian and imported. We raise with the cushion cushion over the plate. It is forever free of leaks and change of parts!

- With us you will save the money of the state and the personal! Make sure:

We are looking for distributors and sponsors to produce our products!

OFFER

Subject:

"Universal fitting with wide format discharge valve with four alternative controls and filling float mechanism for mono-block and ordinary toilet cisterns "

Reg.№ 112 779 /18.07.2018 in the Patent Office

European Certificate: Protocol No. 117 1472 / 23.10.2018

Dear ladies and gentlemen,

our fittings are distinguished by the fact that it is:

- 1. Applicable to the status quo in all the performances of all companies producing mono-block and suspended toilet cisterns with top and bottom water supply.**
- 2. Absolutely secure and simple, without the possibility of buildup of scale, both the filling mechanism, the exhaust valve and forever leakage and supply of spare parts, which is a phenomenon for the world practice. Anyone who doubts the analogue !!**
- 3. With the options listed so far and the following, we will have to create national service systems to remove single failures, which can be of a manufacturing nature only, and not operational, with all the transport costs involved in removing them.**
- 4. With 4 options for controlling the outlet valve, which is technically impossible with the handlebar over the lid, again with a lever, one button and the most unusual - with a foot.**
- 5. With this set of different management, discrimination to people with different physical disabilities is finally and forever abolished, with the choice of management when going to the commercial premises, which is absolutely impossible with the status quo. And it is especially important to remove the touch by hand into the public WCs without the use of electronics.**
- 6. After adjusting the exhaust valve, it is possible to discharge the volume of water in the dwellings and, necessarily,**

the entire amount in public places.

7. The armature works in the status quo, in harmony with the physical laws in three options:

works in the status quo, in sync with physical laws in three options:

a. Once with the lifting of the cistern from the plate with our fittings installed.
b. Second by placing a universal ballast in an already released volume in it by our fittings to maximize the water level at a reduced volume of 5-6 liters.

c. Third and most optimal - merging the above options to be able to realizes and direct suction of the odors from the toilet, which is technically impossible with the status quo.

8. Meets the requirements of the EU Directive of 13.11.2013 on the use of cisterns in a small physiological need of three and of up to 6 liters of water 3/6. We are 1.5 / 5

9. The manufactured fittings are in a closed economic way, using 100% recycled plastics and minimal energy costs. This will be our contribution to the fight against the pollution of nature by plastic waste and that is what we are really responding to the call of the European Union and the fight against climate change. But not in words!

All this has made us share with you the citizens to update your armature. And on we offer the companies to incorporate it into the mono-block and suspended toilet cages, without disrupting the design of the dishware dish, the customers tell us that the mana-block design gets another nice look.

It is not addressed to a particular company, because everyone, without exception, is using an absolutely sophisticated armature with the same principle of op

We replace the parts with ours, we raise the cistern over the plate. The holster is closed

With your armature!

With our fittings!

RENEWAL

COMPLETED

The porcelain companies provide 10 years warranty. On the armature 3/3 / because of the particularly complicated performance of the status quo of the inevitable buildup of limestone on the slides of the elevator type filling mechanisms, which also block the open sealing of the discharge valve, which deforms and leaks appear. Then a complete disassembly is required to clean the slider, to replace the seal, which can only be done by a professional. With us this option - is dropping!

We will supply you with shared fittings that are unmatched in the world practice by providing 10 years and more warranty. It is engraved in our big font, not microscopic, as it is on your current fittings, which can only be read with a magnifying glass. It is probably not accidental !! ??

You will no longer take negatives for the fittings!

With us forever without leaks and spare parts!

And that can happen. All depends on you !

We have been producing for 15 years, but on:

"Super-economical elliptical toilet cisterns and extensions"

- Reg. № 111743 at the Patent Office, updated under No. 112881 / 18.02.2019 and with:

European Certificate - Protocol No: 1172823 / 09.2016

- Norwegian Green Industry certificate, April 2016

- Swiss Social Design Certificate - from 21.04.2017

- Only ours meet the EU Directive of 13.11.2013 to collect 6L of water.

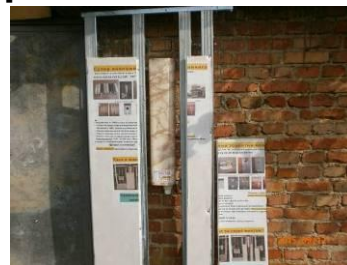

- We apply for the Guinness Records for the longest 2000 mm cartridge with a F 75 mm

- With them we build perfect WC complexes for kindergartens, hotels, hostels, skyscrapers using industrial water from wells, lakes, nautical, purification instead of expensive drinking, which is already an alternative. Here the water is decontaminated automatically with sulfur-chlorine and other reagents and with minimal means can automatically daily flavor for the whole complex. There is a large volume of treated water in event of power failure or malfunction.

Refurbishment of the status quo can be done in a short time without disturbing the landscape around the object, or visibly the interior of the premises.

With the civicity "cubicle builders" with ours

Cisterns made a sharp turn by offering a "Simplified Current Structure for embedding "with PVC-paneling, the figure in front of you or with a mounted mounting of the cistern from the hanging or standing toilet bowl, in another room or in the bathroom furniture for easy service in order not to break the gypsum board in case of dam

**Without bins, because it's self-supporting!
Detachable barrier of PVC paneling.**

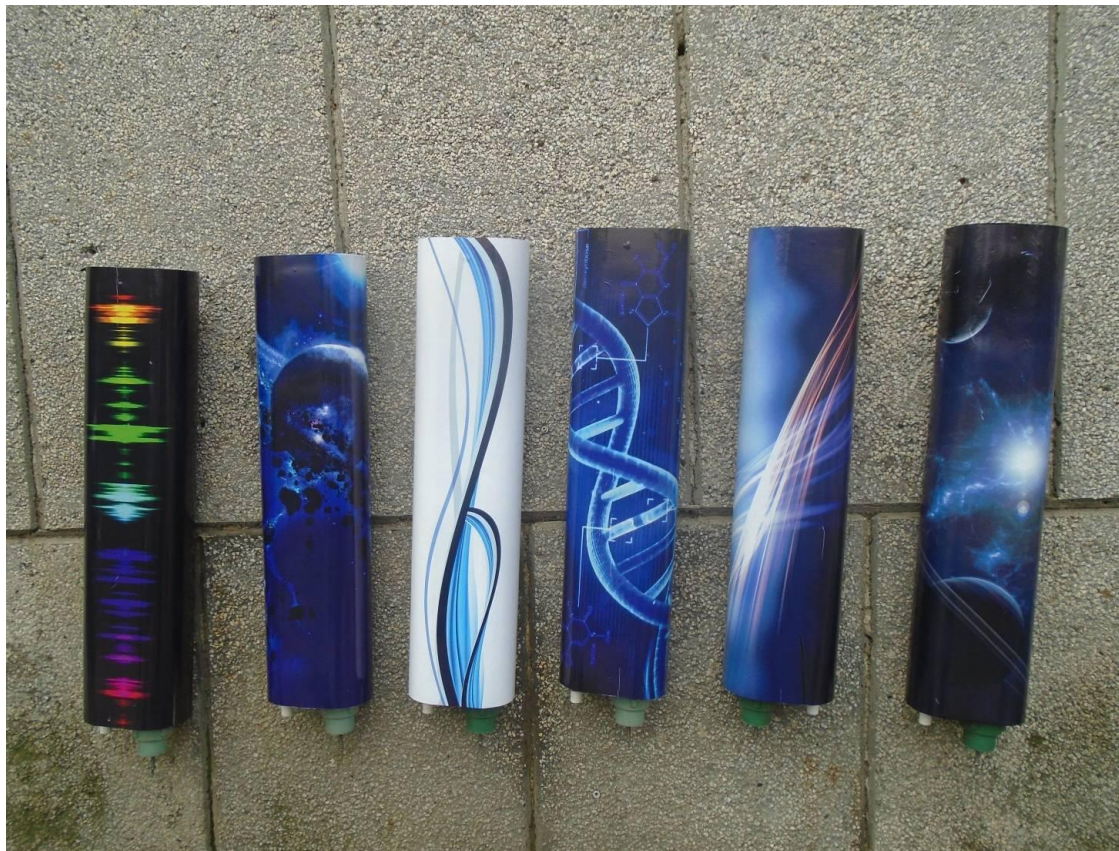

At first glance, children realize the benefits of these cisterns. Small physical volume, large water column, great impact cleaning power. They are also particularly effective on Aqua Blade's dishes, where water leaks from small holes, nozzles. Made of PVC, they are attached to one point as a picture, the water is fed from the bottom through a filter and taken to the dish with an etched, corrugated hose, but smooth inside. Folded, with a vision chosen by customer catalog or with desired logo, photos, collage sent to our email. Everything is unparalleled!

Forever without leaks and spare parts supply!

And with all options like the monoblock fitting in item 3

CE

- Dear ladies and gentlemen,
this is our offer. We look forward to your decisions! amperasp@abv.bg

CE

In the parents of Mr. Lechkov

Cracked mono-block replaced by a cistern in the Blue Zone - Yambol

I am a passing company and produce in limited quantities:

- 1 "Super-economical toilet cisterns"**
- 2 Super-fittings for mono-block toilet cisterns with 4 controls**
- 3. "Mono and duo module direct ventilation of toilet bowl odors"**
- 4. "Structure for external installation of a super-cistern" in the furniture of the unit, in another room.,**
- 5. "Structures for concealed installation of a super-cassette with dismountable PVC paneling"**
- 6. "WC-complexes for kindergartens, hotels, hostels, residential cooperatives ..." for working with industrial well water, from lakes, with sea, with water from treatment plants,**

instead of expensive drinking water. In addition to being further disinfected with sur-chlorine, each day will be differently colored, flavored without the use of expensive drinking water. The reconstruction will be done without disturbance, the eaves around the buildings, or in the buildings with modern technical means and materials.

We already have European certificates for the first two.

Everything I share is unparalleled in the world of industry.

With these technologies and products, we can make a real contribution to the fight against global warming, not in words, but with a real contribution to protecting the environment, saving energy, the primary materials that produce the status quo.

We manufacture them from RECYCLED PLASTICS with minimum energy costs for the production of the parts until they are finished in finished form.

It is silly and a crime against nature to produce MORE toilet cisterns for sanitary and hygienic facilities using current technologies!

Their application time is running out! Support me and yes together contribute to the global conservation of nature!

Our open-air open-air museum!

In any public housing, there may be no other technical means, but without them there is no way to live. And this is the alpha and omega of support we need to succeed in this cause with new technologies.

Time works for us, not the status quo!

No matter how unpleasant - this is the truth!

How much technology is left in the past!

Check out the first layout to illustrate the work of the products:

https://www.facebook.com/100001842044637/videos/vb.100001842044637/2832998650104842/?type=2&video_source=user_video_tab

And with the new mobile models, each customer will activate them himself and see how the product works. If you need more information, press the light button and a consultant shop arrives.

I must note that they do not have the best aesthetic appearance because are zero series, but with modern materials they will shine.

There are opportunities for development. Manage sensors, voice commands for people with other aesthetic attitudes, and all sorts of other gluttony without harming nature.

1. Poster with real assemblies shown, without computer processing.

2. Model for showing the work of the super-cistern. There are 22 cisterns in the area smaller and square.

https://www.facebook.com/100001842044637/videos/vb.100001842044637/3023126317758740/?type=2&video_source=user_video_tab

3. Combined layout to show the principle of building:

"Structures for external installation with super-cassette with demountable PVC paneling",

"Structures for concealed installation of a super-cassette with demountable PVC paneling"

https://www.facebook.com/100001842044637/videos/vb.100001842044637/3023160214422017/?type=2&video_source=user_video_tab

4. Layout for displaying the performance of super-fittings for mono-blocks.

https://www.facebook.com/100001842044637/videos/vb.100001842044637/3023130741091631/?type=2&video_source=user_video_tab

5. Mobile stand for displaying the operation of the cisterns and testing before the customer of the boiler he purchased.

https://www.facebook.com/100001842044637/videos/vb.100001842044637/3023152691089436/?type=2&video_source=user_video_tab

**We have an equipped van in which we demonstrate the work of the products.
Ladies and Gentlemen,**

Some things are repeated, but this is the practice. Nothing can be done at once at the top. I realize by saying that it has no analogue in the world practice, how some look with derision. My experience proves it when initially sharing with clients. what costs they have in the sanitary facilities with their current fountain pans. The new ones in a few months will only be paid for up to now maintenance costs. Finally .. It is true that there are neither computers nor laptops, smart phones, without which a limited number of people live quietly, but without a bathroom is impossible. RIGHT !

Support the innovative! Become our Distributor!
